

ABSTRACT

The invention provides a liquid pharmaceutical composition and methods for use in the treating of bone diseases, the composition being an aqueous solution comprising 0.05% to 35% by weight of ibandronaic acid or salts thereof; 0.1% to 5% by weight of a pH regulating agent; 1% to 15% by weight of a co-solvent; 0.005% to 0.5% by weight of a conserving agent; 1% to 90% by weight of a deionized water; and excipients and pharmaceutically acceptable stabilizers, wherein the composition has a pH of about 2 to 7. The composition is formulated for sublingual administration and enteric administration.
